

Quartzelec and TMMS form strategic Oman joint venture

Generator Services Company LLC to expand rotating equipment support across the Middle East

Quartzelec, the UK-headquartered engineering services provider with an established presence IN Abu Dhabi, has entered into a 50/50 joint venture with Oman-based Turbo Machinery Maintenance Services LLC (TMMS) to establish Generator Services Company LLC (GSC).

The new company strengthens Quartzelec's regional capability and long-term commitment to the Middle East, providing specialist maintenance, repair, refurbishment and life-extension services for rotating electrical equipment serving the power generation, oil and gas, water and industrial sectors.

Operating from TMMS' facilities in Oman, GSC will combine local delivery capability with international engineering expertise to support customers across the region.

Dominic Buse, Director of International Operations at Quartzelec, said: "The formation of Generator Services Company is another important step in Quartzelec's international growth strategy and reinforces our commitment to customers across the Middle East. Building on our existing regional presence, this partnership strengthens our ability to support operators of critical rotating equipment with specialist engineering expertise delivered closer to where it is needed."

Mohamed Al Sibani, Director of TMMS added: "The launch of GSC brings together two organisations with a shared commitment to technical excellence, customer service and long-term investment in the region. We believe this partnership creates a strong platform for supporting customers across Oman and the wider Middle East as demand for specialist rotating equipment services continues to grow."

Generator Services Company LLC is expected to be fully operational from September 2026.
